# Aether

## Page-by-Page Product Manual

2026-08-29

## Page-by-page guides

Each guide follows: Purpose → When to use it → How to get there → What you can do → Related pages.

Every route is also listed in the [complete page index](#).

### Intelligence

| Page                                   | What it covers                                                          |
|----------------------------------------|-------------------------------------------------------------------------|
| <a href="#">Runtime Affinity</a>       | Workload class affinity and runtime fit                                 |
| <a href="#">AI Engine</a>              | Intent scoring, runtime recommendations & migration planning            |
| <a href="#">Confidential Computing</a> | TEE capabilities, attestation trust scores, and Ragnarok integration    |
| <a href="#">Cost Estimation</a>        | Resource cost projections across runtimes                               |
| <a href="#">Drift Detection</a>        | Configuration drift & desired-state reconciliation                      |
| <a href="#">Intelligence Layer</a>     | Failure predictions, threats, cost optimization, and global placement   |
| <a href="#">Migrations</a>             | AI migration planner with risk analysis and strategy                    |
| <a href="#">Policy Check</a>           | Validate workloads against policy rules                                 |
| <a href="#">Security Center</a>        | Threats, secrets, policies, and hardening                               |
| <a href="#">Zyra</a>                   | AI infrastructure operating layer — multi-LLM, multi-agent intelligence |

### Operations

| Page                             | What it covers                                         |
|----------------------------------|--------------------------------------------------------|
| <a href="#">Activity Monitor</a> | CPU, memory, restarts, and errors across the fleet     |
| <a href="#">Alerts</a>           | Notification channels, alert rules, and webhook tests  |
| <a href="#">Cluster Browser</a>  | Browse and manage Kubernetes resources                 |
| <a href="#">Compose Import</a>   | Import Docker Compose into Aether workloads            |
| <a href="#">Dependencies</a>     | Workload dependency graph                              |
| <a href="#">Visual Editor</a>    | Form-based workload designer (no YAML required)        |
| <a href="#">Environments</a>     | Environment tiers and configuration                    |
| <a href="#">Events</a>           | Platform and workload events                           |
| <a href="#">Fleet Overview</a>   | Multi-cluster inventory, Hubble, and PacketWolf links  |
| <a href="#">Health Monitor</a>   | Workload health checks and status                      |
| <a href="#">Helm App Store</a>   | Install curated charts with a guided wizard            |
| <a href="#">Observability</a>    | Health, metrics, events, and correlated diagnostics    |
| <a href="#">Platform</a>         | HA mode, setup recommendations, OPA, and observability |
| <a href="#">Scheduler</a>        | Scheduling recommendations and placement               |
| <a href="#">SLA Compliance</a>   | SLA tracking and compliance                            |

Primary

| Page                           | What it covers                                                           |
|--------------------------------|--------------------------------------------------------------------------|
| <a href="#">Applications</a>   | Manage Kubernetes apps like an operating system — not like YAML          |
| <a href="#">Runtime Fabric</a> | Live Application → Runtime → Cluster → Node topology                     |
| <a href="#">Overview</a>       | Fleet briefing, savings, and capacity intelligence                       |
| <a href="#">Workloads</a>      | Deploy, monitor, and manage across Podman, Kubernetes, KubeVirt & Metal3 |

Resources

| Page                           | What it covers                                                           |
|--------------------------------|--------------------------------------------------------------------------|
| <a href="#">Audit Trail</a>    | Tamper-evident audit log                                                 |
| <a href="#">Backups</a>        | Backup snapshots and restore                                             |
| <a href="#">GPU / Forge</a>    | Forge GPU capacity, nodes, and AI placement                              |
| <a href="#">GitOps</a>         | GitOps reconciliation status                                             |
| <a href="#">Hosted SaaS</a>    | Tenants, API keys, metering, and Stripe billing                          |
| <a href="#">Labs</a>           | Experimental AI-generated infrastructure artifacts                       |
| <a href="#">Metrics</a>        | Platform and workload metrics                                            |

44 guides. Regenerate: `node scripts/customer-docs/generate-guide-index.mjs` .

# Runtime Affinity

---

## Purpose

Workload class affinity and runtime fit

## When to use it

- Open this surface when the job matches the purpose above
- Start from the product home / dashboard if you are unsure where to begin
- Confirm auth and that required backends/operators are reachable if data looks empty

## How to get there

- Route / id: `/affinity`
- Nav: **Intelligence** → **Runtime Affinity** (sidebar, command palette, or desktop nav)

## Operate from the console (UX)

1. Open `/affinity` and wait for live data from Aether.
2. Use filters and search when the page provides them.
3. Drill into a row or card for detail, then jump to related surfaces.
4. For mutating actions: review impact, role gates, and confirmation dialogs first.

If the page stays empty, check service health, auth configuration, and that dependencies for this domain are installed.

## Related pages

- [Getting Started](#)
  - [Page index](#)
-

# AI Engine

---

## Purpose

Intent scoring, runtime recommendations & migration planning

## When to use it

- Open this surface when the job matches the purpose above
- Start from the product home / dashboard if you are unsure where to begin
- Confirm auth and that required backends/operators are reachable if data looks empty

## How to get there

- Route / id: `/ai`
- Nav: **Intelligence** → **AI Engine** (sidebar, command palette, or desktop nav)

## Operate from the console (UX)

1. Open `/ai` and wait for live data from Aether.
2. Use filters and search when the page provides them.
3. Drill into a row or card for detail, then jump to related surfaces.
4. For mutating actions: review impact, role gates, and confirmation dialogs first.

If the page stays empty, check service health, auth configuration, and that dependencies for this domain are installed.

## Related pages

-

# Confidential Computing

---

## Purpose

TEE capabilities, attestation trust scores, and Ragnarok integration

## When to use it

- Open this surface when the job matches the purpose above
- Start from the product home / dashboard if you are unsure where to begin
- Confirm auth and that required backends/operators are reachable if data looks empty

## How to get there

- Route / id: `/confidential`
- Nav: **Intelligence** → **Confidential Computing** (sidebar, command palette, or desktop nav)

## Operate from the console (UX)

1. Open `/confidential` and wait for live data from Aether.
2. Use filters and search when the page provides them.
3. Drill into a row or card for detail, then jump to related surfaces.
4. For mutating actions: review impact, role gates, and confirmation dialogs first.

If the page stays empty, check service health, auth configuration, and that dependencies for this domain are installed.

# Cost Estimation

---

## Purpose

Resource cost projections across runtimes

## When to use it

- Open this surface when the job matches the purpose above
- Start from the product home / dashboard if you are unsure where to begin
- Confirm auth and that required backends/operators are reachable if data looks empty

## How to get there

- Route / id: `/cost`
- Nav: **Intelligence** → **Cost Estimation** (sidebar, command palette, or desktop nav)

## Operate from the console (UX)

1. Open `/cost` and wait for live data from Aether.
2. Use filters and search when the page provides them.
3. Drill into a row or card for detail, then jump to related surfaces.
4. For mutating actions: review impact, role gates, and confirmation dialogs first.

If the page stays empty, check service health, auth configuration, and that dependencies for this domain are installed.

# Drift Detection

---

## Purpose

Configuration drift & desired-state reconciliation

## When to use it

- Open this surface when the job matches the purpose above
- Start from the product home / dashboard if you are unsure where to begin
- Confirm auth and that required backends/operators are reachable if data looks empty

## How to get there

- Route / id: `/drift`
- Nav: **Intelligence** → **Drift Detection** (sidebar, command palette, or desktop nav)

## Operate from the console (UX)

1. Open `/drift` and wait for live data from Aether.
2. Use filters and search when the page provides them.
3. Drill into a row or card for detail, then jump to related surfaces.
4. For mutating actions: review impact, role gates, and confirmation dialogs first.

If the page stays empty, check service health, auth configuration, and that dependencies for this domain are installed.

# Intelligence Layer

---

## Purpose

Failure predictions, threats, cost optimization, and global placement

## When to use it

- Open this surface when the job matches the purpose above
- Start from the product home / dashboard if you are unsure where to begin
- Confirm auth and that required backends/operators are reachable if data looks empty

## How to get there

- Route / id: `/intelligence`
- Nav: **Intelligence** → **Intelligence Layer** (sidebar, command palette, or desktop nav)

## Operate from the console (UX)

1. Open `/intelligence` and wait for live data from Aether.
2. Use filters and search when the page provides them.
3. Drill into a row or card for detail, then jump to related surfaces.
4. For mutating actions: review impact, role gates, and confirmation dialogs first.

If the page stays empty, check service health, auth configuration, and that dependencies for this domain are installed.

# Migrations

---

## Purpose

AI migration planner with risk analysis and strategy

## When to use it

- Open this surface when the job matches the purpose above
- Start from the product home / dashboard if you are unsure where to begin
- Confirm auth and that required backends/operators are reachable if data looks empty

## How to get there

- Route / id: `/migrations`
- Nav: **Intelligence** → **Migrations** (sidebar, command palette, or desktop nav)

## Operate from the console (UX)

1. Open `/migrations` and wait for live data from Aether.
2. Use filters and search when the page provides them.
3. Drill into a row or card for detail, then jump to related surfaces.
4. For mutating actions: review impact, role gates, and confirmation dialogs first.

If the page stays empty, check service health, auth configuration, and that dependencies for this domain are installed.

# Policy Check

---

## Purpose

Validate workloads against policy rules

## When to use it

- Open this surface when the job matches the purpose above
- Start from the product home / dashboard if you are unsure where to begin
- Confirm auth and that required backends/operators are reachable if data looks empty

## How to get there

- Route / id: `/policy`
- Nav: **Intelligence** → **Policy Check** (sidebar, command palette, or desktop nav)

## Operate from the console (UX)

1. Open `/policy` and wait for live data from Aether.
2. Use filters and search when the page provides them.
3. Drill into a row or card for detail, then jump to related surfaces.
4. For mutating actions: review impact, role gates, and confirmation dialogs first.

If the page stays empty, check service health, auth configuration, and that dependencies for this domain are installed.

# Security Center

---

## Purpose

Threats, secrets, policies, and hardening

## When to use it

- Open this surface when the job matches the purpose above
- Start from the product home / dashboard if you are unsure where to begin
- Confirm auth and that required backends/operators are reachable if data looks empty

## How to get there

- Route / id: `/security`
- Nav: **Intelligence** → **Security Center** (sidebar, command palette, or desktop nav)

## Operate from the console (UX)

1. Open `/security` and wait for live data from Aether.
2. Use filters and search when the page provides them.
3. Drill into a row or card for detail, then jump to related surfaces.
4. For mutating actions: review impact, role gates, and confirmation dialogs first.

If the page stays empty, check service health, auth configuration, and that dependencies for this domain are installed.

# Zyra

---

## Purpose

AI infrastructure operating layer — multi-LLM, multi-agent intelligence

## When to use it

- Open this surface when the job matches the purpose above
- Start from the product home / dashboard if you are unsure where to begin
- Confirm auth and that required backends/operators are reachable if data looks empty

## How to get there

- Route / id: `/zyra`
- Nav: **Intelligence** → **Zyra** (sidebar, command palette, or desktop nav)

## Operate from the console (UX)

1. Open `/zyra` and wait for live data from Aether.
2. Use filters and search when the page provides them.
3. Drill into a row or card for detail, then jump to related surfaces.
4. For mutating actions: review impact, role gates, and confirmation dialogs first.

If the page stays empty, check service health, auth configuration, and that dependencies for this domain are installed.

# Activity Monitor

---

## Purpose

CPU, memory, restarts, and errors across the fleet

## When to use it

- Open this surface when the job matches the purpose above
- Start from the product home / dashboard if you are unsure where to begin
- Confirm auth and that required backends/operators are reachable if data looks empty

## How to get there

- Route / id: `/activity`
- Nav: **Operations** → **Activity Monitor** (sidebar, command palette, or desktop nav)

## Operate from the console (UX)

1. Open `/activity` and wait for live data from Aether.
2. Use filters and search when the page provides them.
3. Drill into a row or card for detail, then jump to related surfaces.
4. For mutating actions: review impact, role gates, and confirmation dialogs first.

If the page stays empty, check service health, auth configuration, and that dependencies for this domain are installed.

# Alerts

---

## Purpose

Notification channels, alert rules, and webhook tests

## When to use it

- Open this surface when the job matches the purpose above
- Start from the product home / dashboard if you are unsure where to begin
- Confirm auth and that required backends/operators are reachable if data looks empty

## How to get there

- Route / id: `/alerts`
- Nav: **Operations** → **Alerts** (sidebar, command palette, or desktop nav)

## Operate from the console (UX)

1. Open `/alerts` and wait for live data from Aether.
2. Use filters and search when the page provides them.
3. Drill into a row or card for detail, then jump to related surfaces.
4. For mutating actions: review impact, role gates, and confirmation dialogs first.

If the page stays empty, check service health, auth configuration, and that dependencies for this domain are installed.

# Cluster Browser

---

## Purpose

Browse and manage Kubernetes resources

## When to use it

- Open this surface when the job matches the purpose above
- Start from the product home / dashboard if you are unsure where to begin
- Confirm auth and that required backends/operators are reachable if data looks empty

## How to get there

- Route / id: `/clusters`
- Nav: **Operations** → **Cluster Browser** (sidebar, command palette, or desktop nav)

## Operate from the console (UX)

1. Open `/clusters` and wait for live data from Aether.
2. Use filters and search when the page provides them.
3. Drill into a row or card for detail, then jump to related surfaces.
4. For mutating actions: review impact, role gates, and confirmation dialogs first.

If the page stays empty, check service health, auth configuration, and that dependencies for this domain are installed.

# Compose Import

---

## Purpose

Import Docker Compose into Aether workloads

## When to use it

- Open this surface when the job matches the purpose above
- Start from the product home / dashboard if you are unsure where to begin
- Confirm auth and that required backends/operators are reachable if data looks empty

## How to get there

- Route / id: `/compose`
- Nav: **Operations** → **Compose Import** (sidebar, command palette, or desktop nav)

## Operate from the console (UX)

1. Open `/compose` and wait for live data from Aether.
2. Use filters and search when the page provides them.
3. Drill into a row or card for detail, then jump to related surfaces.
4. For mutating actions: review impact, role gates, and confirmation dialogs first.

If the page stays empty, check service health, auth configuration, and that dependencies for this domain are installed.

# Dependencies

---

## Purpose

Workload dependency graph

## When to use it

- Open this surface when the job matches the purpose above
- Start from the product home / dashboard if you are unsure where to begin
- Confirm auth and that required backends/operators are reachable if data looks empty

## How to get there

- Route / id: `/deps`
- Nav: **Operations** → **Dependencies** (sidebar, command palette, or desktop nav)

## Operate from the console (UX)

1. Open `/deps` and wait for live data from Aether.
2. Use filters and search when the page provides them.
3. Drill into a row or card for detail, then jump to related surfaces.
4. For mutating actions: review impact, role gates, and confirmation dialogs first.

If the page stays empty, check service health, auth configuration, and that dependencies for this domain are installed.

# Visual Editor

---

## Purpose

Form-based workload designer (no YAML required)

## When to use it

- Open this surface when the job matches the purpose above
- Start from the product home / dashboard if you are unsure where to begin
- Confirm auth and that required backends/operators are reachable if data looks empty

## How to get there

- Route / id: `/editor`
- Nav: **Operations** → **Visual Editor** (sidebar, command palette, or desktop nav)

## Operate from the console (UX)

1. Open `/editor` and wait for live data from Aether.
2. Use filters and search when the page provides them.
3. Drill into a row or card for detail, then jump to related surfaces.
4. For mutating actions: review impact, role gates, and confirmation dialogs first.

If the page stays empty, check service health, auth configuration, and that dependencies for this domain are installed.

# Environments

---

## Purpose

Environment tiers and configuration

## When to use it

- Open this surface when the job matches the purpose above
- Start from the product home / dashboard if you are unsure where to begin
- Confirm auth and that required backends/operators are reachable if data looks empty

## How to get there

- Route / id: `/envs`
- Nav: **Operations** → **Environments** (sidebar, command palette, or desktop nav)

## Operate from the console (UX)

1. Open `/envs` and wait for live data from Aether.
2. Use filters and search when the page provides them.
3. Drill into a row or card for detail, then jump to related surfaces.
4. For mutating actions: review impact, role gates, and confirmation dialogs first.

If the page stays empty, check service health, auth configuration, and that dependencies for this domain are installed.

# Events

---

## Purpose

Platform and workload events

## When to use it

- Open this surface when the job matches the purpose above
- Start from the product home / dashboard if you are unsure where to begin
- Confirm auth and that required backends/operators are reachable if data looks empty

## How to get there

- Route / id: `/events`
- Nav: **Operations** → **Events** (sidebar, command palette, or desktop nav)

## Operate from the console (UX)

1. Open `/events` and wait for live data from Aether.
2. Use filters and search when the page provides them.
3. Drill into a row or card for detail, then jump to related surfaces.
4. For mutating actions: review impact, role gates, and confirmation dialogs first.

If the page stays empty, check service health, auth configuration, and that dependencies for this domain are installed.

# Fleet Overview

---

## Purpose

Multi-cluster inventory, Hubble, and PacketWolf links

## When to use it

- Open this surface when the job matches the purpose above
- Start from the product home / dashboard if you are unsure where to begin
- Confirm auth and that required backends/operators are reachable if data looks empty

## How to get there

- Route / id: `/fleet`
- Nav: **Operations** → **Fleet Overview** (sidebar, command palette, or desktop nav)

## Operate from the console (UX)

1. Open `/fleet` and wait for live data from Aether.
2. Use filters and search when the page provides them.
3. Drill into a row or card for detail, then jump to related surfaces.
4. For mutating actions: review impact, role gates, and confirmation dialogs first.

If the page stays empty, check service health, auth configuration, and that dependencies for this domain are installed.

# Health Monitor

---

## Purpose

Workload health checks and status

## When to use it

- Open this surface when the job matches the purpose above
- Start from the product home / dashboard if you are unsure where to begin
- Confirm auth and that required backends/operators are reachable if data looks empty

## How to get there

- Route / id: `/health-monitor`
- Nav: **Operations** → **Health Monitor** (sidebar, command palette, or desktop nav)

## Operate from the console (UX)

1. Open `/health-monitor` and wait for live data from Aether.
2. Use filters and search when the page provides them.
3. Drill into a row or card for detail, then jump to related surfaces.
4. For mutating actions: review impact, role gates, and confirmation dialogs first.

If the page stays empty, check service health, auth configuration, and that dependencies for this domain are installed.

# Helm App Store

---

## Purpose

Install curated charts with a guided wizard

## When to use it

- Open this surface when the job matches the purpose above
- Start from the product home / dashboard if you are unsure where to begin
- Confirm auth and that required backends/operators are reachable if data looks empty

## How to get there

- Route / id: `/helm`
- Nav: **Operations** → **Helm App Store** (sidebar, command palette, or desktop nav)

## Operate from the console (UX)

1. Open `/helm` and wait for live data from Aether.
2. Use filters and search when the page provides them.
3. Drill into a row or card for detail, then jump to related surfaces.
4. For mutating actions: review impact, role gates, and confirmation dialogs first.

If the page stays empty, check service health, auth configuration, and that dependencies for this domain are installed.

# Observability

---

## Purpose

Health, metrics, events, and correlated diagnostics

## When to use it

- Open this surface when the job matches the purpose above
- Start from the product home / dashboard if you are unsure where to begin
- Confirm auth and that required backends/operators are reachable if data looks empty

## How to get there

- Route / id: `/observability`
- Nav: **Operations** → **Observability** (sidebar, command palette, or desktop nav)

## Operate from the console (UX)

1. Open `/observability` and wait for live data from Aether.
2. Use filters and search when the page provides them.
3. Drill into a row or card for detail, then jump to related surfaces.
4. For mutating actions: review impact, role gates, and confirmation dialogs first.

If the page stays empty, check service health, auth configuration, and that dependencies for this domain are installed.

# Platform

---

## Purpose

HA mode, setup recommendations, OPA, and observability

## When to use it

- Open this surface when the job matches the purpose above
- Start from the product home / dashboard if you are unsure where to begin
- Confirm auth and that required backends/operators are reachable if data looks empty

## How to get there

- Route / id: `/platform`
- Nav: **Operations** → **Platform** (sidebar, command palette, or desktop nav)

## Operate from the console (UX)

1. Open `/platform` and wait for live data from Aether.
2. Use filters and search when the page provides them.
3. Drill into a row or card for detail, then jump to related surfaces.
4. For mutating actions: review impact, role gates, and confirmation dialogs first.

If the page stays empty, check service health, auth configuration, and that dependencies for this domain are installed.

# Scheduler

---

## Purpose

Scheduling recommendations and placement

## When to use it

- Open this surface when the job matches the purpose above
- Start from the product home / dashboard if you are unsure where to begin
- Confirm auth and that required backends/operators are reachable if data looks empty

## How to get there

- Route / id: `/scheduler`
- Nav: **Operations** → **Scheduler** (sidebar, command palette, or desktop nav)

## Operate from the console (UX)

1. Open `/scheduler` and wait for live data from Aether.
2. Use filters and search when the page provides them.
3. Drill into a row or card for detail, then jump to related surfaces.
4. For mutating actions: review impact, role gates, and confirmation dialogs first.

If the page stays empty, check service health, auth configuration, and that dependencies for this domain are installed.

# SLA Compliance

---

## Purpose

SLA tracking and compliance

## When to use it

- Open this surface when the job matches the purpose above
- Start from the product home / dashboard if you are unsure where to begin
- Confirm auth and that required backends/operators are reachable if data looks empty

## How to get there

- Route / id: `/sla`
- Nav: **Operations** → **SLA Compliance** (sidebar, command palette, or desktop nav)

## Operate from the console (UX)

1. Open `/sla` and wait for live data from Aether.
2. Use filters and search when the page provides them.
3. Drill into a row or card for detail, then jump to related surfaces.
4. For mutating actions: review impact, role gates, and confirmation dialogs first.

If the page stays empty, check service health, auth configuration, and that dependencies for this domain are installed.

# Applications

---

## Purpose

Manage Kubernetes apps like an operating system — not like YAML

## When to use it

- Open this surface when the job matches the purpose above
- Start from the product home / dashboard if you are unsure where to begin
- Confirm auth and that required backends/operators are reachable if data looks empty

## How to get there

- Route / id: `/applications`
- Nav: **Primary** → **Applications** (sidebar, command palette, or desktop nav)

## Operate from the console (UX)

1. Open `/applications` and wait for live data from Aether.
2. Use filters and search when the page provides them.
3. Drill into a row or card for detail, then jump to related surfaces.
4. For mutating actions: review impact, role gates, and confirmation dialogs first.

If the page stays empty, check service health, auth configuration, and that dependencies for this domain are installed.

# Runtime Fabric

---

## Purpose

Live Application → Runtime → Cluster → Node topology

## When to use it

- Open this surface when the job matches the purpose above
- Start from the product home / dashboard if you are unsure where to begin
- Confirm auth and that required backends/operators are reachable if data looks empty

## How to get there

- Route / id: `/fabric`
- Nav: **Primary** → **Runtime Fabric** (sidebar, command palette, or desktop nav)

## Operate from the console (UX)

1. Open `/fabric` and wait for live data from Aether.
2. Use filters and search when the page provides them.
3. Drill into a row or card for detail, then jump to related surfaces.
4. For mutating actions: review impact, role gates, and confirmation dialogs first.

If the page stays empty, check service health, auth configuration, and that dependencies for this domain are installed.

# Overview

---

## Purpose

Fleet briefing, savings, and capacity intelligence

## When to use it

- Open this surface when the job matches the purpose above
- Start from the product home / dashboard if you are unsure where to begin
- Confirm auth and that required backends/operators are reachable if data looks empty

## How to get there

- Route / id: `/`
- Nav: **Primary** → **Overview** (sidebar, command palette, or desktop nav)

## Operate from the console (UX)

1. Open `/` and wait for live data from Aether.
2. Use filters and search when the page provides them.
3. Drill into a row or card for detail, then jump to related surfaces.
4. For mutating actions: review impact, role gates, and confirmation dialogs first.

If the page stays empty, check service health, auth configuration, and that dependencies for this domain are installed.

# Workloads

---

## Purpose

Deploy, monitor, and manage across Podman, Kubernetes, KubeVirt & Metal3

## When to use it

- Open this surface when the job matches the purpose above
- Start from the product home / dashboard if you are unsure where to begin
- Confirm auth and that required backends/operators are reachable if data looks empty

## How to get there

- Route / id: `/workloads`
- Nav: **Primary** → **Workloads** (sidebar, command palette, or desktop nav)

## Operate from the console (UX)

1. Open `/workloads` and wait for live data from Aether.
2. Use filters and search when the page provides them.
3. Drill into a row or card for detail, then jump to related surfaces.
4. For mutating actions: review impact, role gates, and confirmation dialogs first.

If the page stays empty, check service health, auth configuration, and that dependencies for this domain are installed.

# Audit Trail

---

## Purpose

Tamper-evident audit log

## When to use it

- Open this surface when the job matches the purpose above
- Start from the product home / dashboard if you are unsure where to begin
- Confirm auth and that required backends/operators are reachable if data looks empty

## How to get there

- Route / id: `/audit`
- Nav: **Resources** → **Audit Trail** (sidebar, command palette, or desktop nav)

## Operate from the console (UX)

1. Open `/audit` and wait for live data from Aether.
2. Use filters and search when the page provides them.
3. Drill into a row or card for detail, then jump to related surfaces.
4. For mutating actions: review impact, role gates, and confirmation dialogs first.

If the page stays empty, check service health, auth configuration, and that dependencies for this domain are installed.
